PELICAN™ PCI/PMC CARRIER

The Pelican™ PCI/PMC Carrier card is a standard short length PCI card that supports a single PMC module. It requires no set up, and supports both 3.3V 5V PCI signaling. Develop your software in a conventional desktop PC then move your application and PMC module to a different hardware architecture for deployment.

Features

- Universal 5V or 3.3V PCI signaling
- 3.3V Supply in any PCI slot
- 32 bit PCI 2.1 Compliant
- 96 pin DIN Connector for Debugging PMC Designs

Specifications

Form Factor:

- Short Length PCI

Weight:

- 3.3 oz (unpopulated)

Power Consumption*:

- +3.3VDC — Application dependent
- +5VDC — Application dependent
- +12VDC — Application dependent
- -12VDC — Application dependent

Relative Humidity:

- 5% to 90% (non-condensing)

Operation Temperature:

- 0°C to +55°C

Ordering Information

Model Number	Product / Description
PC-SP001-00	Pelican PMC/PCI carrier card

** Power Consumption based on unpopulated, idle measurements. Actual consumption will vary depending on PMC module power requirements.*
